# WHAT HAPPENS WHEN THE NEEDED MEDICATION DOESN'T ARRIVE IN UKRAINE?

According to *WHO (World Health Organization)* at least 3000 Ukrainians have died due to the **lack of chronic health treatments.**

- Priority to life-threatening burn, bullet and shrapnel injuries;
- 40% of households have at least one member in need of chronic treatment that they can no longer find.

<https://www.axios.com/2022/05/10/ukraine-death-chronic-treatment-who>

*"Ukrainian soldiers practicing applying bandages in a tactical medical training exercise in Kyiv, on July 1."*

## FLAWS IN THE SYSTEM

**40%-70% of donations** do not comply with the WHO strict guidelines. This creates large amounts of inevitably **wasted effort**.

Poor communication between medical facilities results in sending **excessive and unneeded medical supplies**, taking up valuable limited storage space.

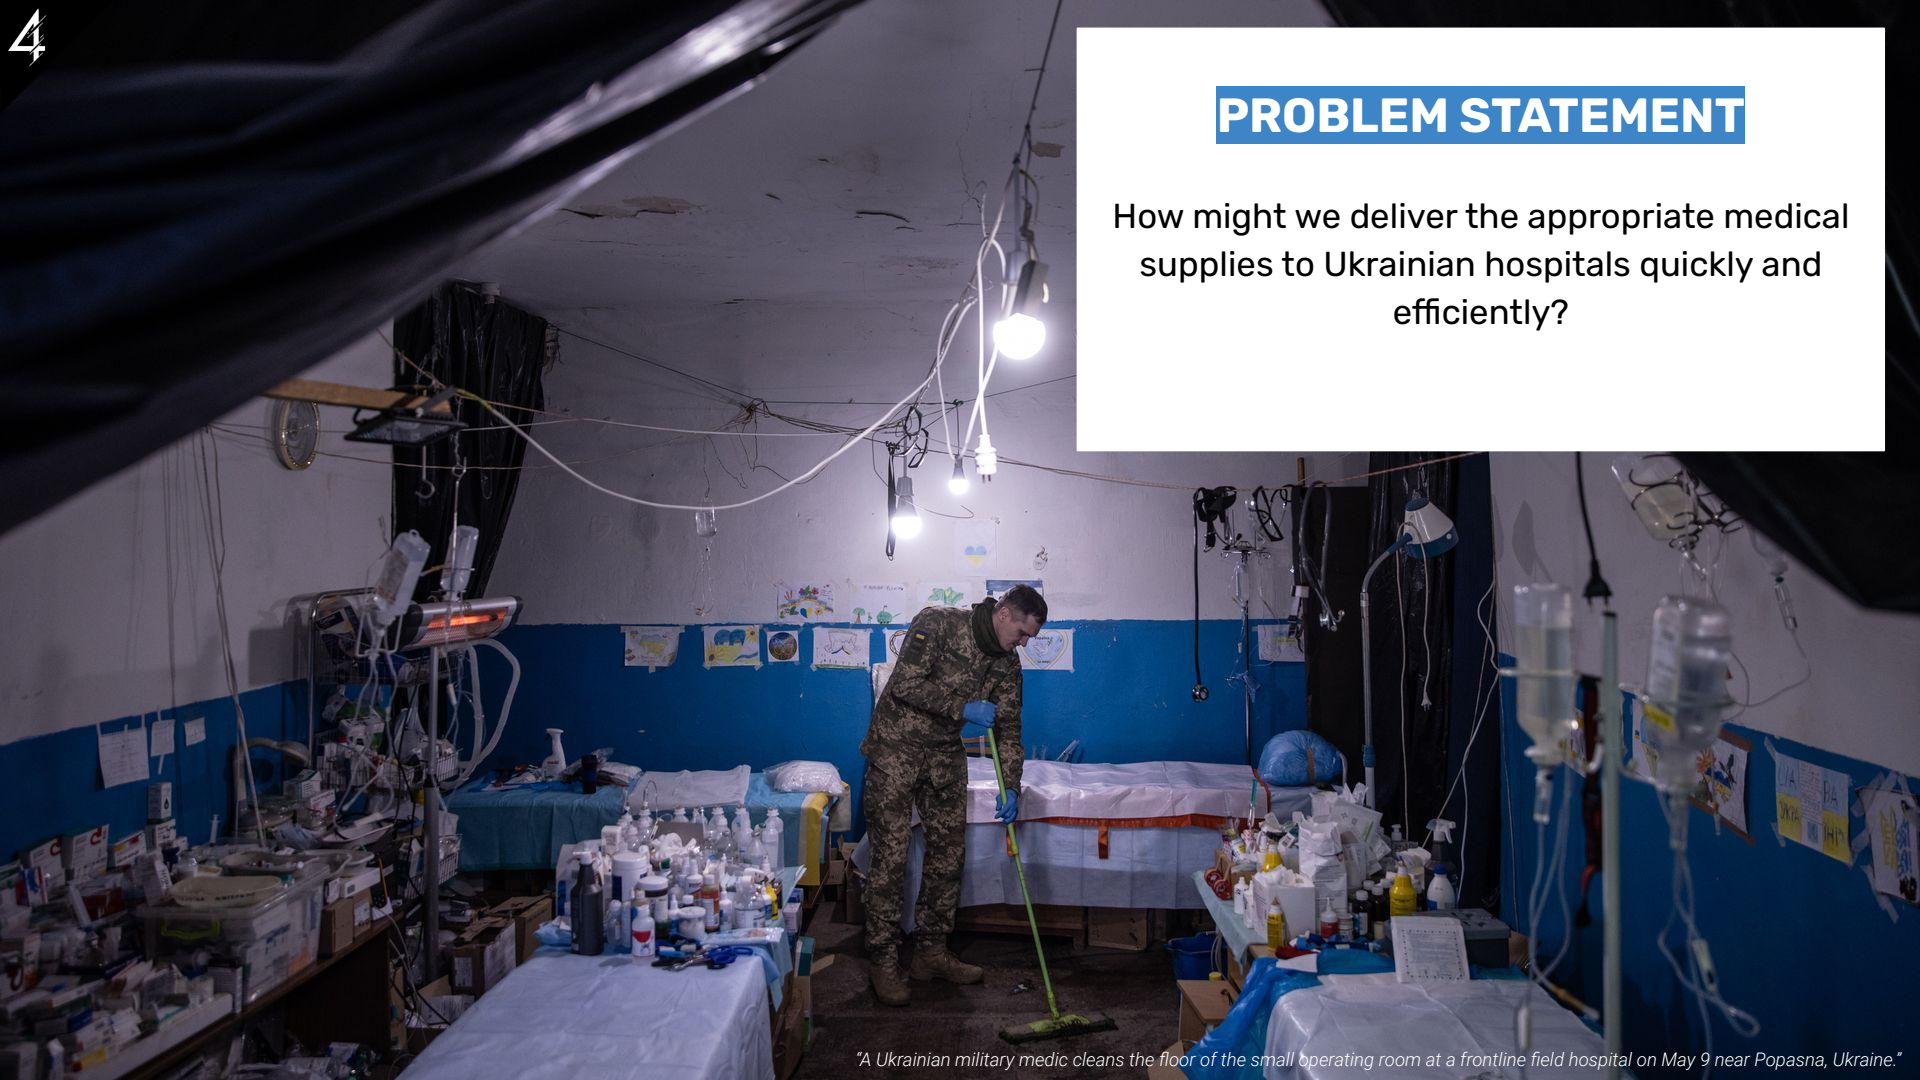

Civilians who live in war zones continue to suffer from the lack of the **correct** medical supplies.

<https://academic.oup.com/inthealth/article/11/5/379/5420717?login=false>

## PROBLEM STATEMENT

How might we deliver the appropriate medical supplies to Ukrainian hospitals quickly and efficiently?

*"A Ukrainian military medic cleans the floor of the small operating room at a frontline field hospital on May 9 near Popasna, Ukraine."*

## SYSTEMS/ GOVERNANCE

How can the official institutions across Europe **facilitate** the donation of medical supplies and send them to the hospitals in Ukraine?

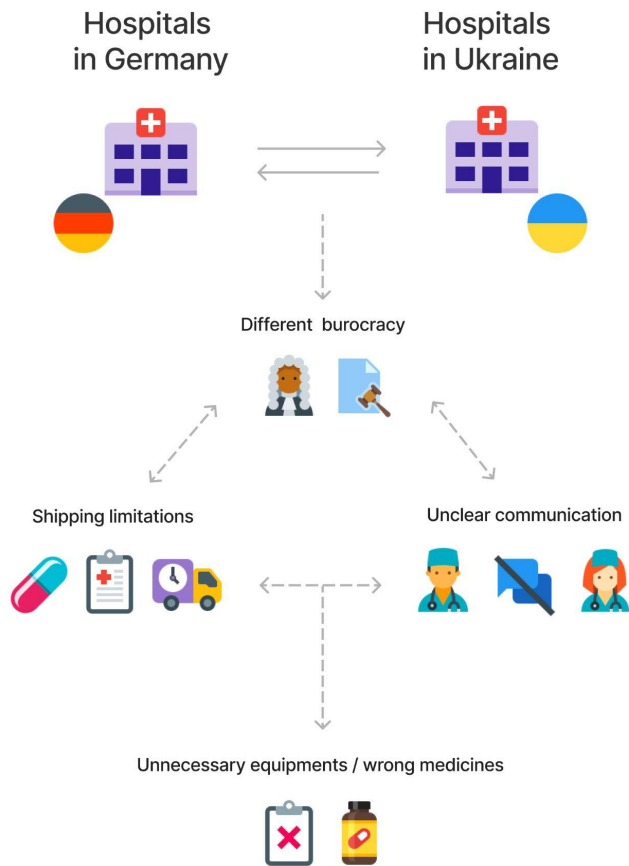

"A Ukrainian soldier who was wounded by artillery being treated at a bus stop turned aid station near Bakhmut on June 23."

## GLOBAL LEVEL

Ukraine is not the only country affected by war nowadays.

**Other countries** like Syria, Yemen, Eritrea **have been suffering** from lack of medical supplies for a long time.

Figuring out *how to connect* donors with countries outside of Europe is **crucial to help millions of other civilians** who have been living the terror of having a war at their doorstep.

## WHY IS IT AN URGENT PROBLEM?

- Many civilians in Ukraine **cannot get proper medical help**, because the necessary supplies are not available.
- The *donations need to reach* people who need them.
- **Improve the communication** between hospitals in Ukraine and hospitals in the EU, for example Germany.
- Bring the **right supplies** to the right people.
- It is difficult to **find information on which medicines can be shipped** (even with a medical prescription) *without or with limitations*.

## GOALS & VALUES

### Goals:

- Treat her patients with the appropriate medication
- Be able to treat war injured patients
- Get in contact with hospitals able to send help for her patients

### Values:

- Hippocratic Oath
- Empathy
- Moral Duty
- Peaceful person

### Motivations:

- Get the necessary medical supplies to resume her activities
- Care for her patients
- Actively help her country to defeat medical shortages

## PAIN POINTS

### Fears:

- Bomb attack that destroy the medical facilities
- Being injured and unable to help

### Frustrations:

- Not being able to help or be helped due to lack of supplies

### Challenges:

- Shortages in various areas (food, hygiene items, etc.)
- Communication problems preventing her to get necessary supplies

## FEELINGS

### Worries:

- If the medical supplies will arrive in time
- Keep her family safe

### Influences:

- Family and Friends
- People who fight for peace
- "Doctors without Borders"

**RUSLANA K.**

**Cardiologist/ General Physician** at a public clinic in Lviv  
*Married, Mother of 1 Child*

## GOALS & VALUES

### Goals:

- Continue treating cancer patients appropriately
- Get in touch with hospitals that received patients, to provide medical records

### Values:

- Hippocratic Oath
- Patriotism
- Justice

### Motivations:

- Provide an appropriated cancer diagnosis and treatment
- Care for his patients
- Help patients to get treated despite the war
- Provide medical assistance for war injured people

## PAIN POINTS

### Fears:

- Bomb attack that destroy the medical facilities
- Losing his family to the war or to a sickness that can't be treated

### Frustrations:

- Inability to provide information about his patients to the hospitals that are now treating them
- Not having enough medication to treat chemotherapy patients properly

### Challenges:

- Communication problems between hospitals in Ukraine and hospitals across Europe receiving Ukrainian patients

## FEELINGS

### Worries:

- If the patients who managed to flee the country will get treated properly, since they don't carry any medical records

### Influences:

- Family and Friends
- "Doctors without Borders"

**NIKOLAI S.**  
**ONCOLOGIST/ General Physician** at a Cancer Research Center in Kyiv  
*Widowed, Father of 2 Children, 5 Grandchildren*

# Explorations

*"How might we's...?"*

## **Problem 1: Improve the delivery process of medical supplies to Ukraine**

- How might we improve the donation to make sure the hospitals get the medical supplies they need?
- How might we make the process of receiving medical supplies take less time?
- How might we better understand the bureaucratic processes to experience less friction in receiving the proper medical supply?

*"How might we's...?"*

## **Problem 2: Transferring patient records between hospitals**

- How might we facilitate the upload of medical data that guarantees the safety of the information for both hospitals and patients?
- How might we make the transferring of patient data between hospitals easier?
- How might we overcome the language barrier concerning the medical records?

## Possible Solutions

- Create an accessible platform that connect hospitals in Ukraine with hospitals in the European Union

There are platforms collecting donations from all over Europe. However, they are too broad, meaning that they are not focused only on medical supplies.

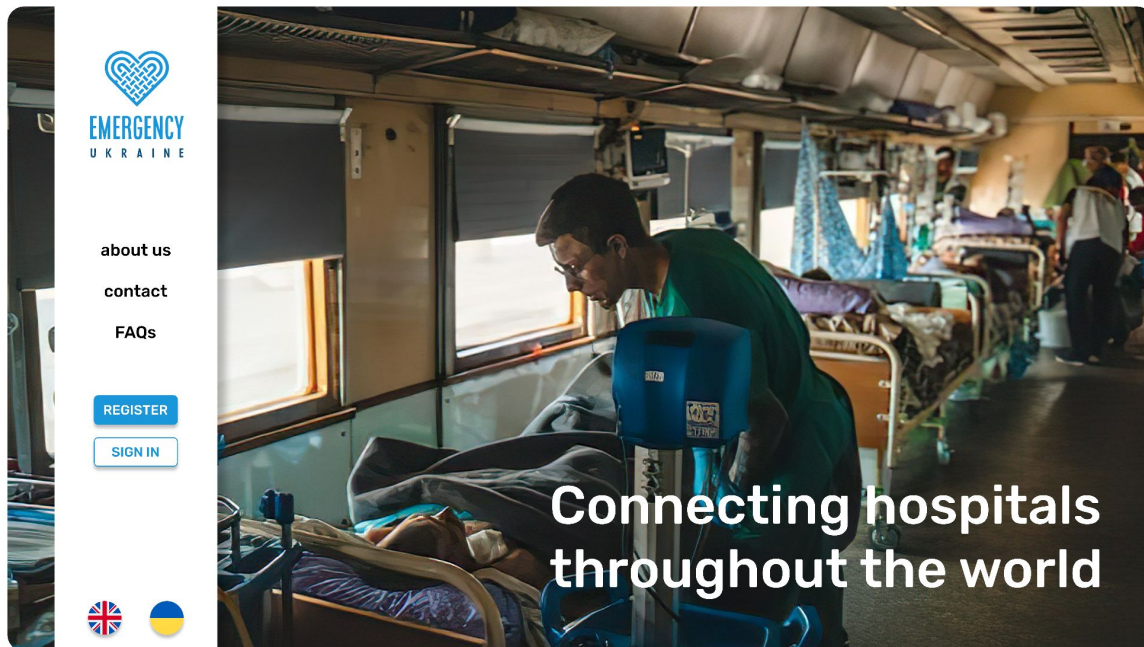

- Create a delivery service that provides feedback about whether the medical supplies were delivered and if the hospitals still need them

Just like with the platforms, there are delivery services providing all kinds of supplies across Ukraine. Nevertheless, prescription medication, like the ones used for cancer treatment, is usually unavailable.

- Create a data transferring app that allows patient data to be quickly available whenever the patients need them

One of the big challenges about patient records is the data protection laws that might not allow an easy process of transferring data. The other big problem is the language barrier, since the records are in Ukrainian and the patients might flee to a country that speaks a different language.

# Final Solution

The image shows a screenshot of the EMERGENCY UKRAINE website interface overlaid on a photograph of a hospital ward. The website interface includes the logo, navigation links, and registration/sign-in buttons. The background photograph shows a healthcare worker in green scrubs attending to a patient in a hospital bed.

**EMERGENCY UKRAINE**

[about us](#)  
[contact](#)  
[FAQs](#)

[REGISTER](#)  
[SIGN IN](#)

**Connecting hospitals throughout the world**

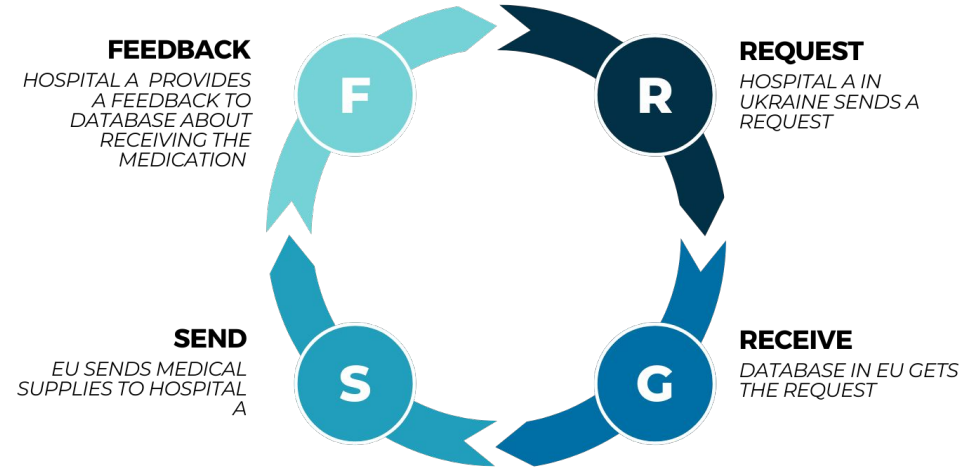

**EMERGENCY UKRAINE** is a responsive platform for effective communication, where Ukrainian doctors can request medicines and supply they need, upload and access medical records, and exchange information.

# Innovation

## FEATURE 1: An effective communication channel

### Database

- **Platform connecting local and charitable medical organizations** to each other to access supply and demand
- *Allow medical facilities to request the proper and correct medical supply needed* at the time
- **Scan feature** to recognize medical supplies to bypass need to type each medical supply on keyboard

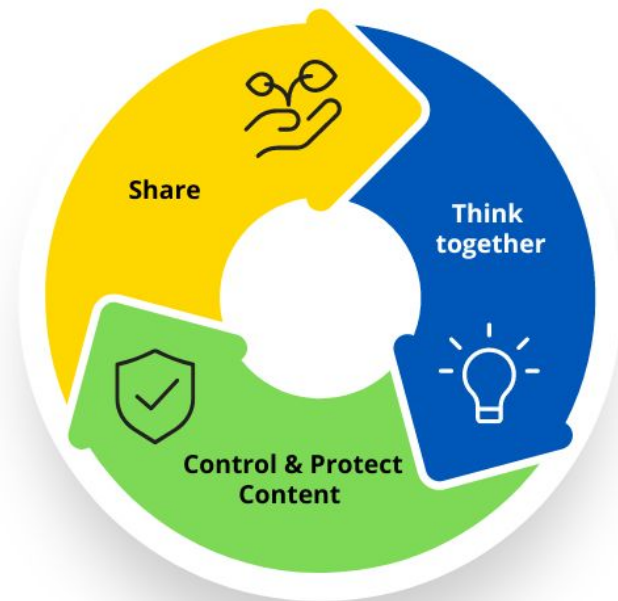

## FEATURE 2: Communication between hospitals

### Networking

- **Communication between doctors**, where they can *share information* about patients in a **safe platform** and **come up with solutions** together
- Allows the medical facilities to send excess medical supplies to the medical facilities that need the medical supply

### Language

- **Efficient translation tool** for medication names and patient records
- Platform designed in Ukrainian and English

## FEATURE 3: Data protection and patient confidentiality

### Documentation

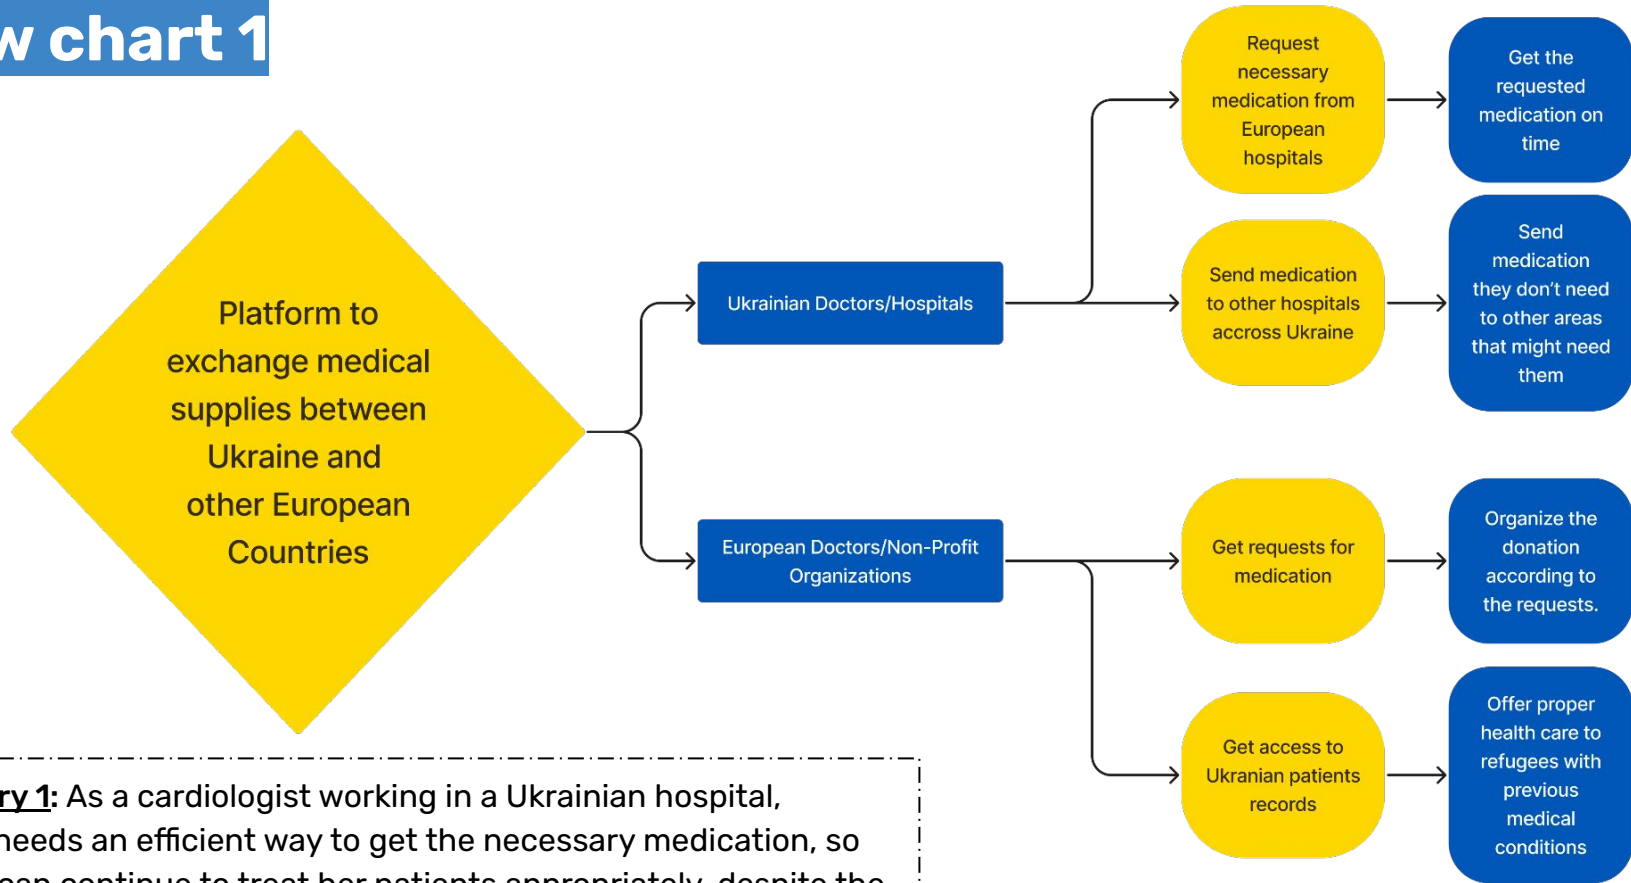

- **Providing medical records for patients** with *difficult medical conditions*:
  - ex. Cancer, PTSD, heart diseases

### Data Protection

- **Encrypt patient records** in a *three-step process*, where the patient, the hospital that treated them first and the hospital to continue the treatment will have access to the data
- Ensure that **the data will have a limited storage time**, and that it will be *destroyed once the storage period is over*
- Require at least two-step process to access the data as a patient or a doctor, to *prevent hackers from cracking the system*

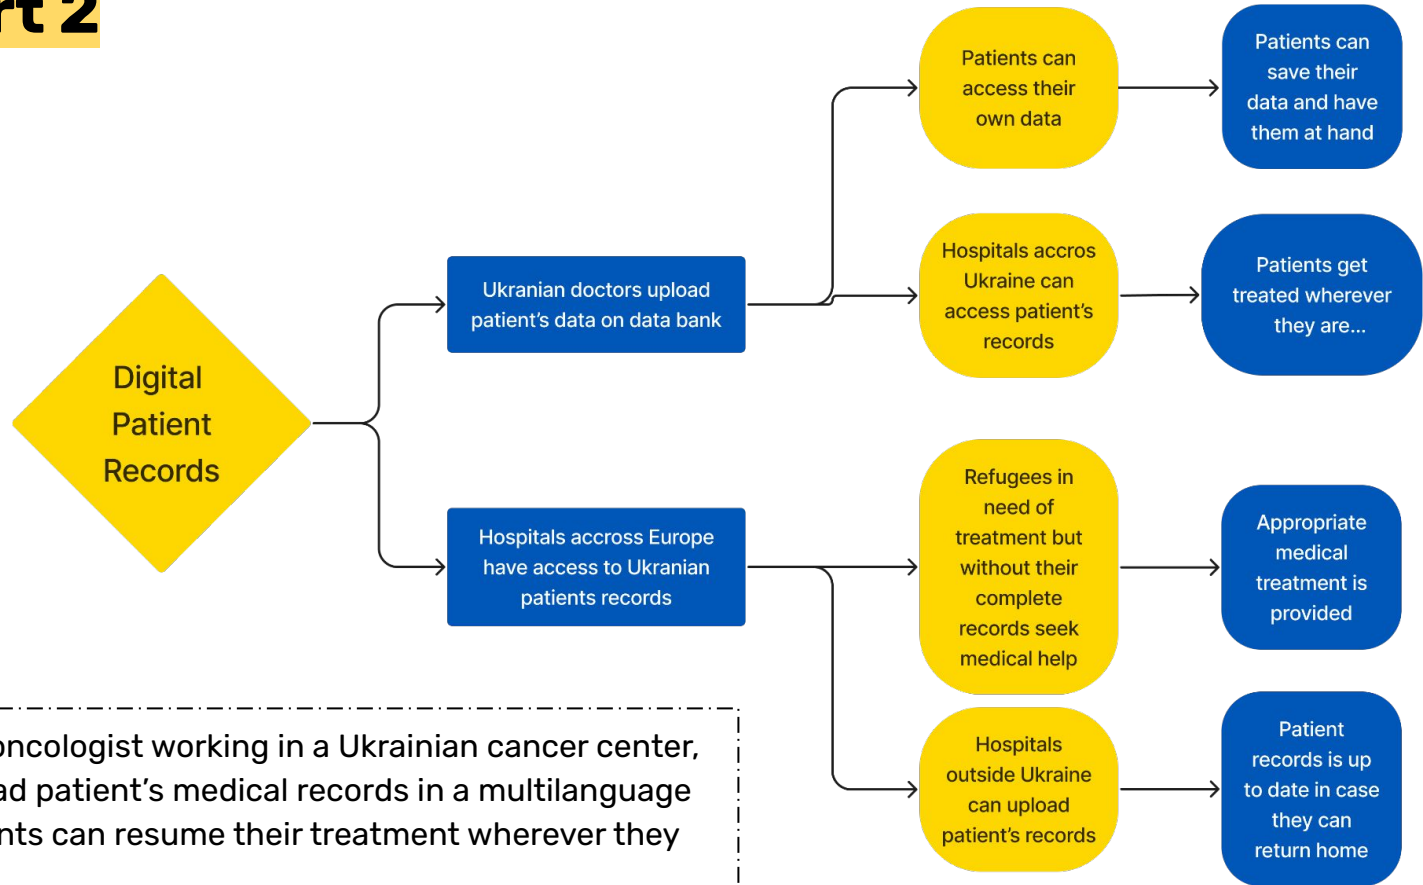

# Flow chart 1

**User Story 1:** As a cardiologist working in a Ukrainian hospital, Ruslana needs an efficient way to get the necessary medication, so that she can continue to treat her patients appropriately, despite the difficulties of the war.

## Flow chart 2

**User Story 2:** As an oncologist working in a Ukrainian cancer center, Nikolai needs to upload patient's medical records in a multilanguage tool, so that his patients can resume their treatment wherever they are in the world.

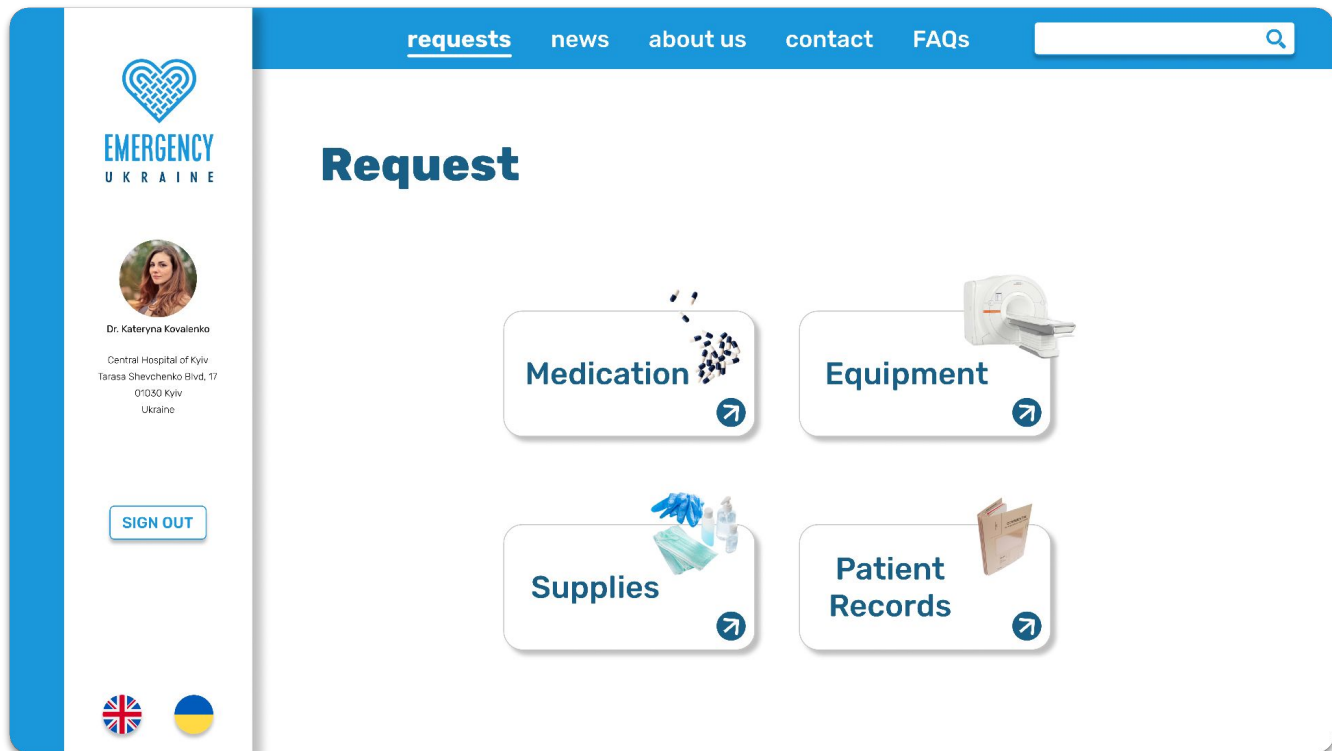

# User Experience

**Emergency Ukraine** has a simple design precisely because it is focused on functionality.

- The website supports two languages.
- The menu collects: information about the website, a contact form and a list of questions and answers for the users.
- The users can choose whether to register a new profile or to log in.

# User Experience

After logging in, the user has several choices divided by categories, to send requests for medical supplies and to request or provide patient records.

# User Experience

The screenshot shows a web interface for 'EMERGENCY UKRAINE'. The top navigation bar is blue and contains links for 'requests', 'news', 'about us', 'contact', and 'FAQs', along with a search icon. The main heading is 'Medication request'. Below this is a table with four rows, each containing three columns: 'Item Description', 'Item Strength', and 'Item Quantity'. On the left sidebar, there is a profile for 'Dr. Kateryna Kovalenko' with a red notification badge, and a 'SIGN OUT' button. At the bottom left, there are flags for the United Kingdom and Ukraine.

On the medication request page, the user can compile a list.

The Ukrainian doctor will need to specify the full name of the medicine, the strength and quantity in order to send the request.

# User Experience

The screenshot displays the 'New request' page. At the top, there is a navigation bar with links for 'requests', 'news', 'about us', 'contact', and 'FAQs', along with a search bar. The main content area is titled 'New request' and includes a prompt: 'Please check the availability and quantity of each requested item:'. Below this, a table lists the requested items and their availability. A 'CONFIRM' button is located at the bottom right of the table area. On the left side, there is a user profile for Dr. Sebastian Schneider, a 'SIGN OUT' button, and flags for the United Kingdom and Ukraine.

**EMERGENCY UKRAINE**

requests news about us contact FAQs

## New request

Please check the availability and quantity of each requested item:

Item	Strength	Quantity	Available	Quantity
Painkillers	Any	Any	<input checked="" type="checkbox"/>	200 units
Depressants	Any	Any	<input checked="" type="checkbox"/>	140 units
Steroids	Any	Any	<input type="checkbox"/>	

[CONFIRM](#)

Dr. Kateryna Kovalenko  
Central Hospital of Kyiv  
Tarasa Shevchenko Blvd, 17  
01030 Kyiv  
Ukraine  
[CONTACT](#)

The donor doctors/hospitals will receive the request.

They will have to indicate if the product is available for shipment, specify the amount they intend to donate/send and confirm.

Doctors will also be able to interact with each other if necessary.

# User Experience

requests news about us contact FAQs

**Dr. Kovalenko,**

in response to your request from 30/07/2022, we hereby inform you that the following items are ready to be sent to you. Please confirm if you still need the items:

Item	Strength	Quantity	Origin	Still Needed
Painkillers	Any	Any	Berlin-Germany	<input checked="" type="checkbox"/>
Depressants	Any	Any	Krakov-Poland	<input checked="" type="checkbox"/>
Steroids	Any	Any	Berlin-Germany	<input type="checkbox"/>
Stimulants	Any	Any	Paris-France	<input checked="" type="checkbox"/>

**CONFIRM**

EMERGENCY UKRAINE

Dr. Kateryna Kovalenko

Central Hospital of Kyiv  
Tarasa Shevchenko Blvd, 17  
01030 Kyiv  
Ukraine

SIGN OUT

UKRAINE

The Ukrainian doctor receives feedback regarding the previous request.

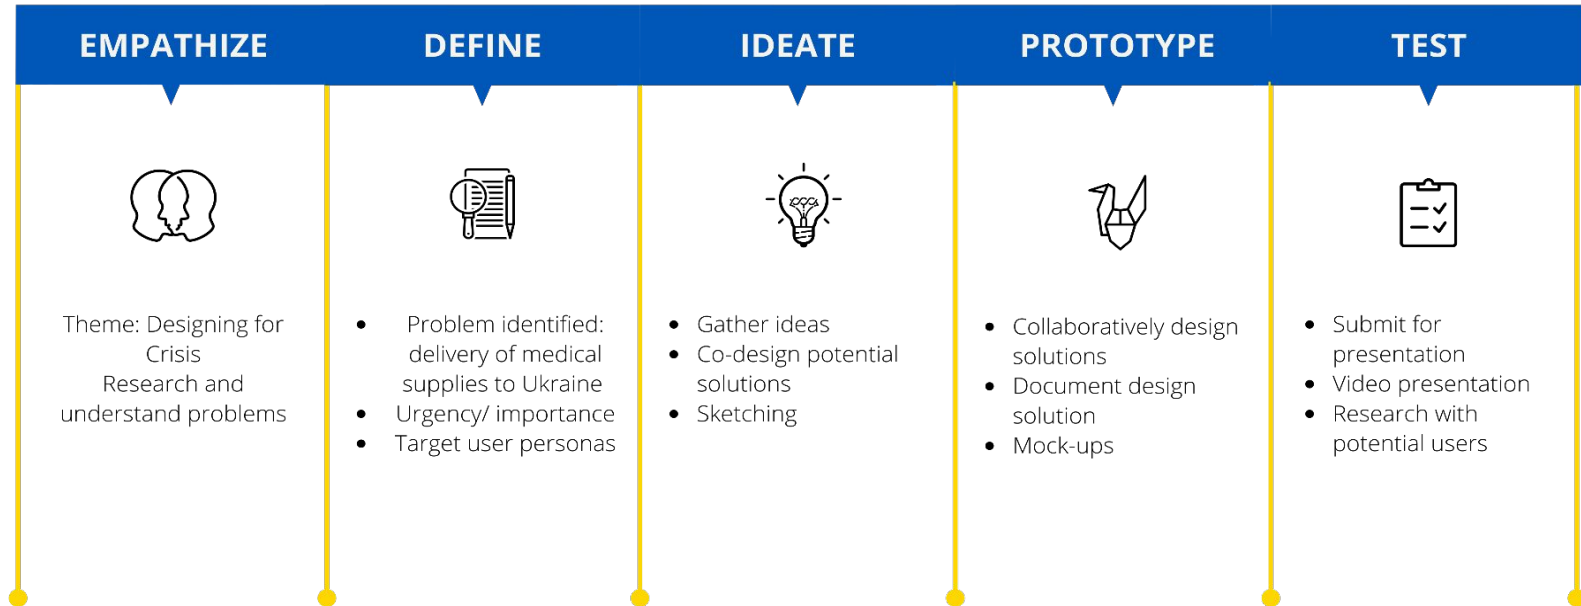

The origin of the medicines and the quantity ready for shipment will be specified.

Furthermore, the Ukrainian doctor will have to specify if the requested medicines are still needed and confirm.

This is to not only avoid unnecessary medicines being shipped, but also to prevent waste of resources.

# DESIGN THINKING

## PROCESS

# Impact on the Society

## For other war zones

- Improve communication between doctors during a humanitarian crisis.
- Less time to request and receive medical supplies during an emergency scenario.

## For non-profit organizations donating supplies

- Raise awareness about medical conditions that have nothing to do with war, but can't be treated because the right medicine never arrives.

## For society in general

- Facilitate the transfer of medical records, so that patients can easily resume the treatment anywhere in the world.

# Sustainability

## HOW IS YOUR SOLUTION SUSTAINABLE?

### Long-lasting

- After the war, the platform can be used as a communication tool and for patient's records.

### Sustainable

- It can improve the process of donation between countries with more resources and countries in need of medical supplies.

### Good for the planet

- Reuse medical equipments by donating them to hospitals in need.
- Less waste of paper for documentation.
- Less waste of medication.

# Practicality & Business Viability

## HOW CAN YOUR SOLUTION BE IMPLEMENTED AND SUCCESSFUL?

- Cooperation between product owners and Ministry of Health from countries in war to ensure a safe data transfer from paper records to digital records.
- Ukraine already started a digitalization process in the health care sector, so there is an openness to use digital tools.
- Financial aid from donors and government to create and maintain the platform.
- Provide tutorials to help doctors and patients use the various tools and features.
